

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

question from Maine, owing to their failure to carefully read the title of Mr. Boardman's list, upon the authority of which they made their supposed records, and many other species as well as this one were cited upon the same grounds and their own ignorance of the exact boundary line between Maine and New Brunswick. Almost invariably Grand Menan birds have been given a place in New England bird lists, which shows the ignorance of geography exhibited by the authors.

I have in my possession a letter from Mr. Boardman in which he states that he has in his possession two specimens of the Wheatear, one taken at *Grand Menan, New Brunswick*, and the other taken on *Indian Island, New Brunswick*. This letter was written in 1896, and gives corrections of many other records made by geographical ignoramuses. Through Mr. Boardman's aid all these erroneous Maine records were straightened out and corrected and may be found in the 'List of the Birds of Maine.' — ORA W. KNIGHT, *Bangor, Me.*

Bird Notes from Pueblo Co., Colorado. — I recently spent a few weeks eighteen miles southwest of Pueblo, in which district I have passed ten winters. I was surprised to find the following birds which I have never known to winter there before: Jan. 7. A flock of Mourning Doves (*Zenaidura macroura*), about 40 in number, were seen feeding amongst some sunflowers. Jan. 8. A Western Meadowlark (*Sturnella m. neglecta*). Jan. 14. A pair of Sparrow Hawks (*Falco sparverius*) were observed. Jan. 12. Two Rock Wrens (*Salpinctes obsoletus*) were seen amongst some rocks not more than ten yards from where I was standing. — WILLOUGHBY P. LOWE, *Seward, Nebraska.*

Corrections to Birds of Parry Sound and Muskoka. — The following corrections should be made to my 'List of the Birds of the Districts of Parry Sound and Muskoka, Ontario,' published in the January number of the current volume of 'The Auk':

Page 35, No. 12, *Merganser serrator*. "Breeds in both districts" should read, Probably breeds in both districts.

" 35, " 13, *Lophodytes cucullatus*, requires the same correction.

" 44, " 180, *Harporhynchus rufus*. Mr. Kay informs me that Brown Thrashers are fairly common in Port Sydney.

" 45, " 188, *Regulus satrapa*. "An abundant winter resident" should read, Probably a winter resident.

" 45, " 189, *Regulus calendula*, "and winter" is a slip and should be struck out.

Regulus satrapa certainly occurs in Muskoka till late in December, but the testimony as to its being a winter resident is so conflicting that I have thought it best to qualify my reference to it.
